

Essentials of Generative AI

Optimizing GenAI Models

Quick Recap

- GenAI designs various types of creative content, including images, text, and music, emphasizing its role in creative endeavors.
- LLMs like **ChatGPT** are advanced AI models that go beyond understanding human language. It also processes and analyzes data in various formats, such as images, graphs, and charts.

Engage and Think

You are working on a document and must quickly summarize a lengthy report. Instead of reading the entire report yourself, copy and paste it into a GenAI writing assistant. With a simple prompt like **Summarize the following text in 3-4 concise paragraphs**, the AI generates a clear and concise summary for you in seconds.

How does the AI system understand and extract the key points from a lengthy text to generate a concise and structured summary from the simple prompt you provided?

Learning Objectives

By the end of this lesson, you will be able to:

- 🔗 Generate effective prompts for optimizing interactions with GenAI models
- 🔗 Apply advanced prompting techniques, such as zero-shot, few-shot, chain-of-thought, self-consistency, and tree-of-thought, to generate the desired output from the GenAI model
- 🔗 Understand the concepts of pre-training and fine-tuning the GenAI models to enhance domain-specific performance

Introduction to Prompt Engineering

Prompt Engineering

Prompt engineering involves instructing conversational AI models, such as ChatGPT, to generate desired outputs.

A well-built prompt must have:

Clarity

Specificity

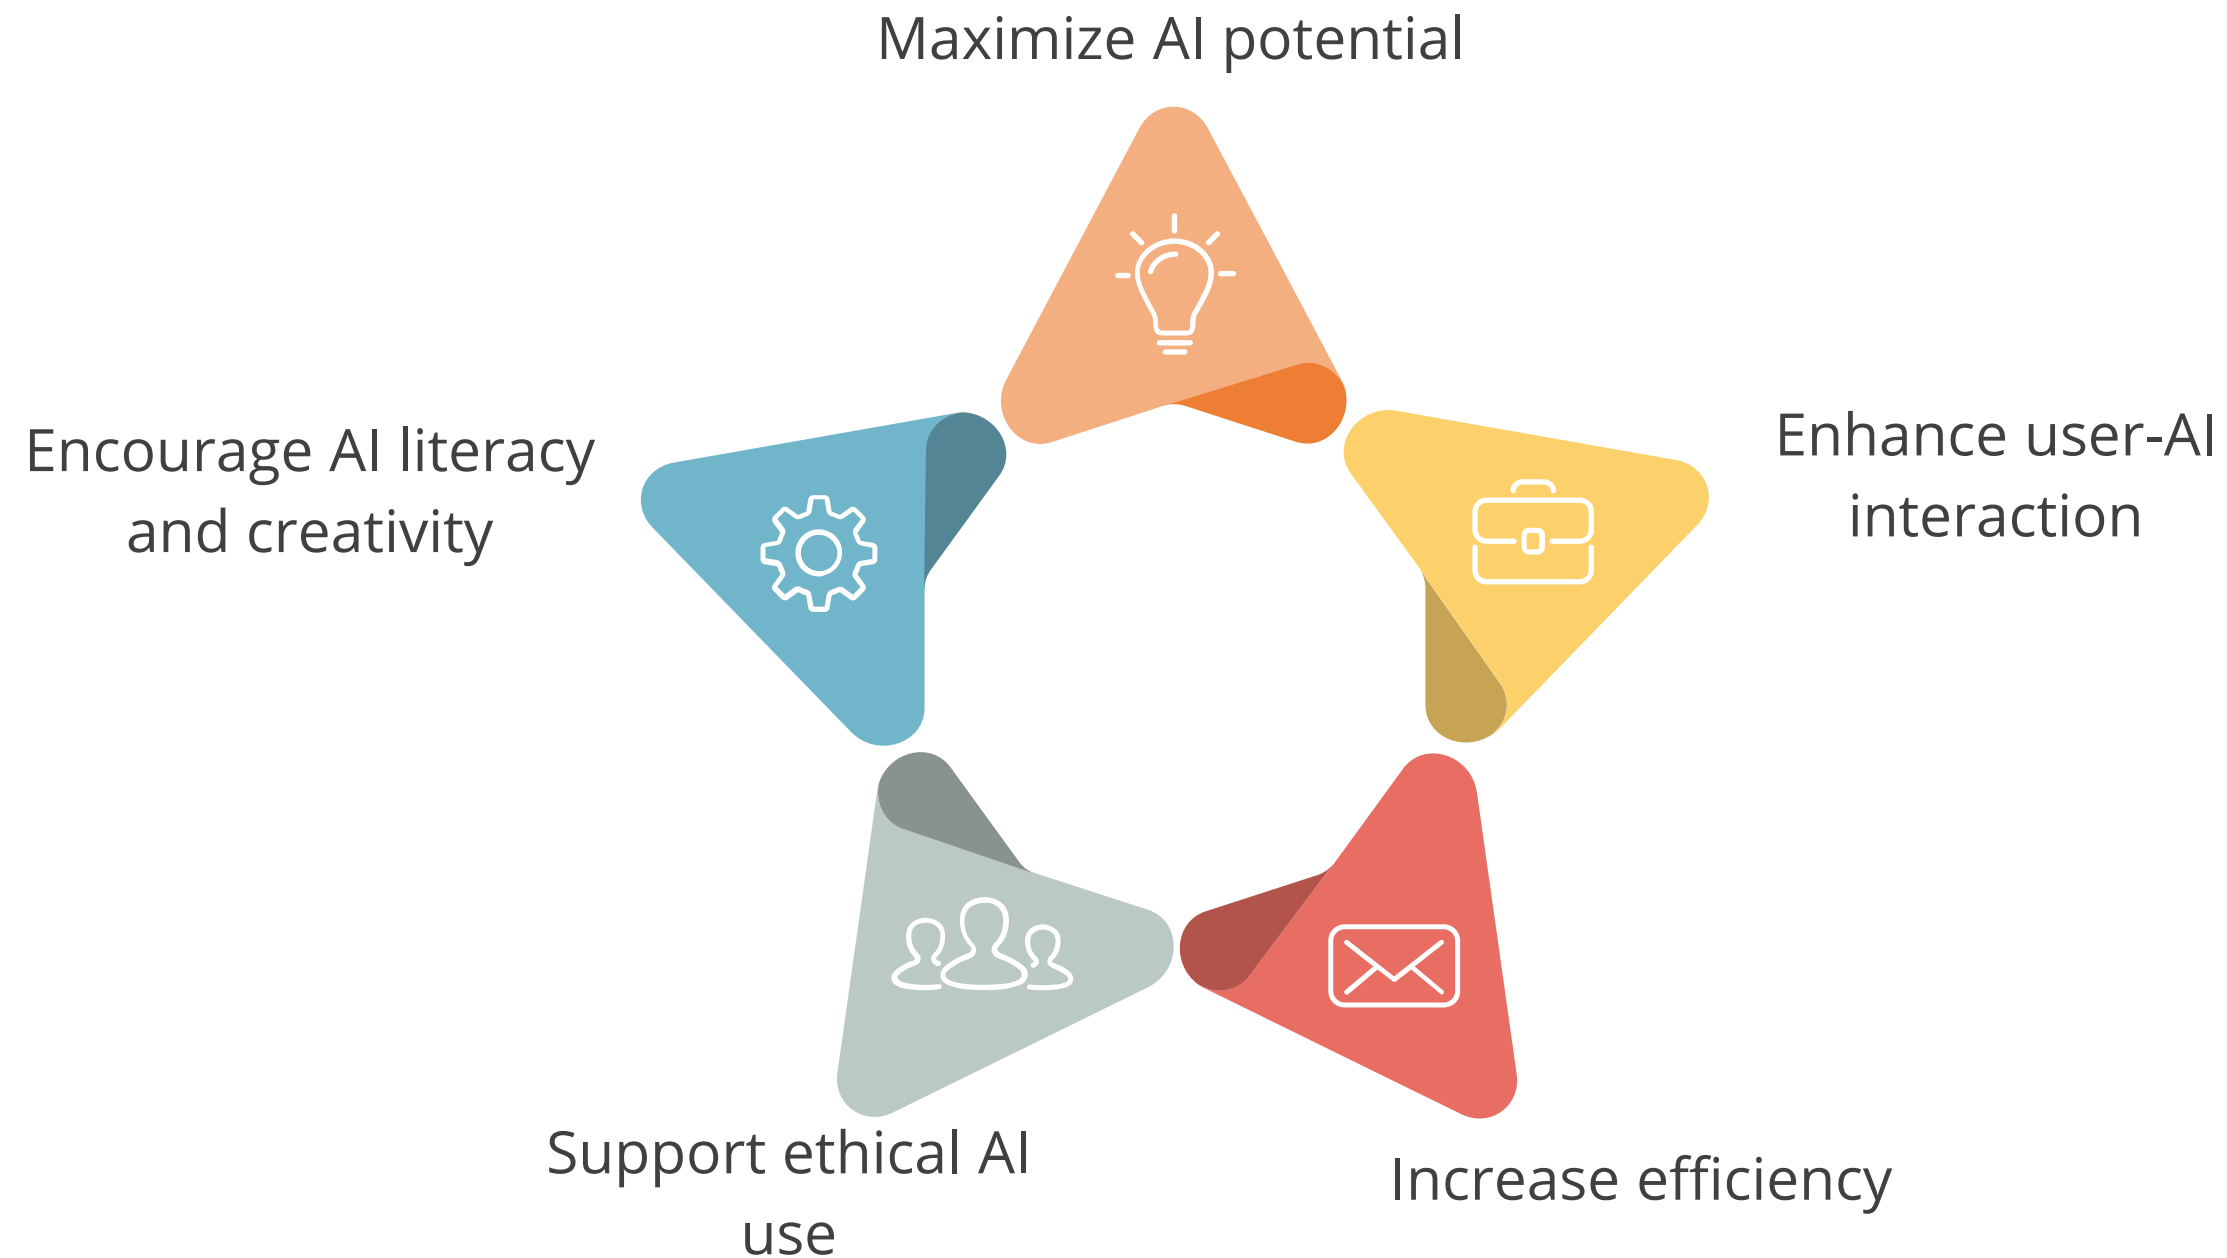

Format

Context

Importance of Prompt Engineering

It is increasingly recognized as a crucial skill set in the realm of GenAI. Here are several key reasons why prompt engineering is needed:

Prompts: Examples

Whenever you give a generic prompt, you'll get a random response each time, but engineered prompts will bring back a relevant response.

Generic prompt

 **You**

Write a catchy caption for my Instagram post

 **ChatGPT**

"Embracing the beauty of simplicity in a chaotic world ✨ #SimpleJoys #FindYourZen"

Engineered prompt

 **You**

Craft a concise and engaging caption for Instagram post featuring our refreshment drink. The target audience for this post are young adults, travelers, and partygoers. Please include five high-performing hashtags related to refreshment drinks.

 **ChatGPT**

"Sip, savor, and seize the moment with our refreshing drink! Whether you're exploring new horizons or dancing the night away, this is your perfect companion. ✨ #DrinkUp #RefreshReviveRepeat #AdventureFuel #PartyStarter #ThirstQuencher"

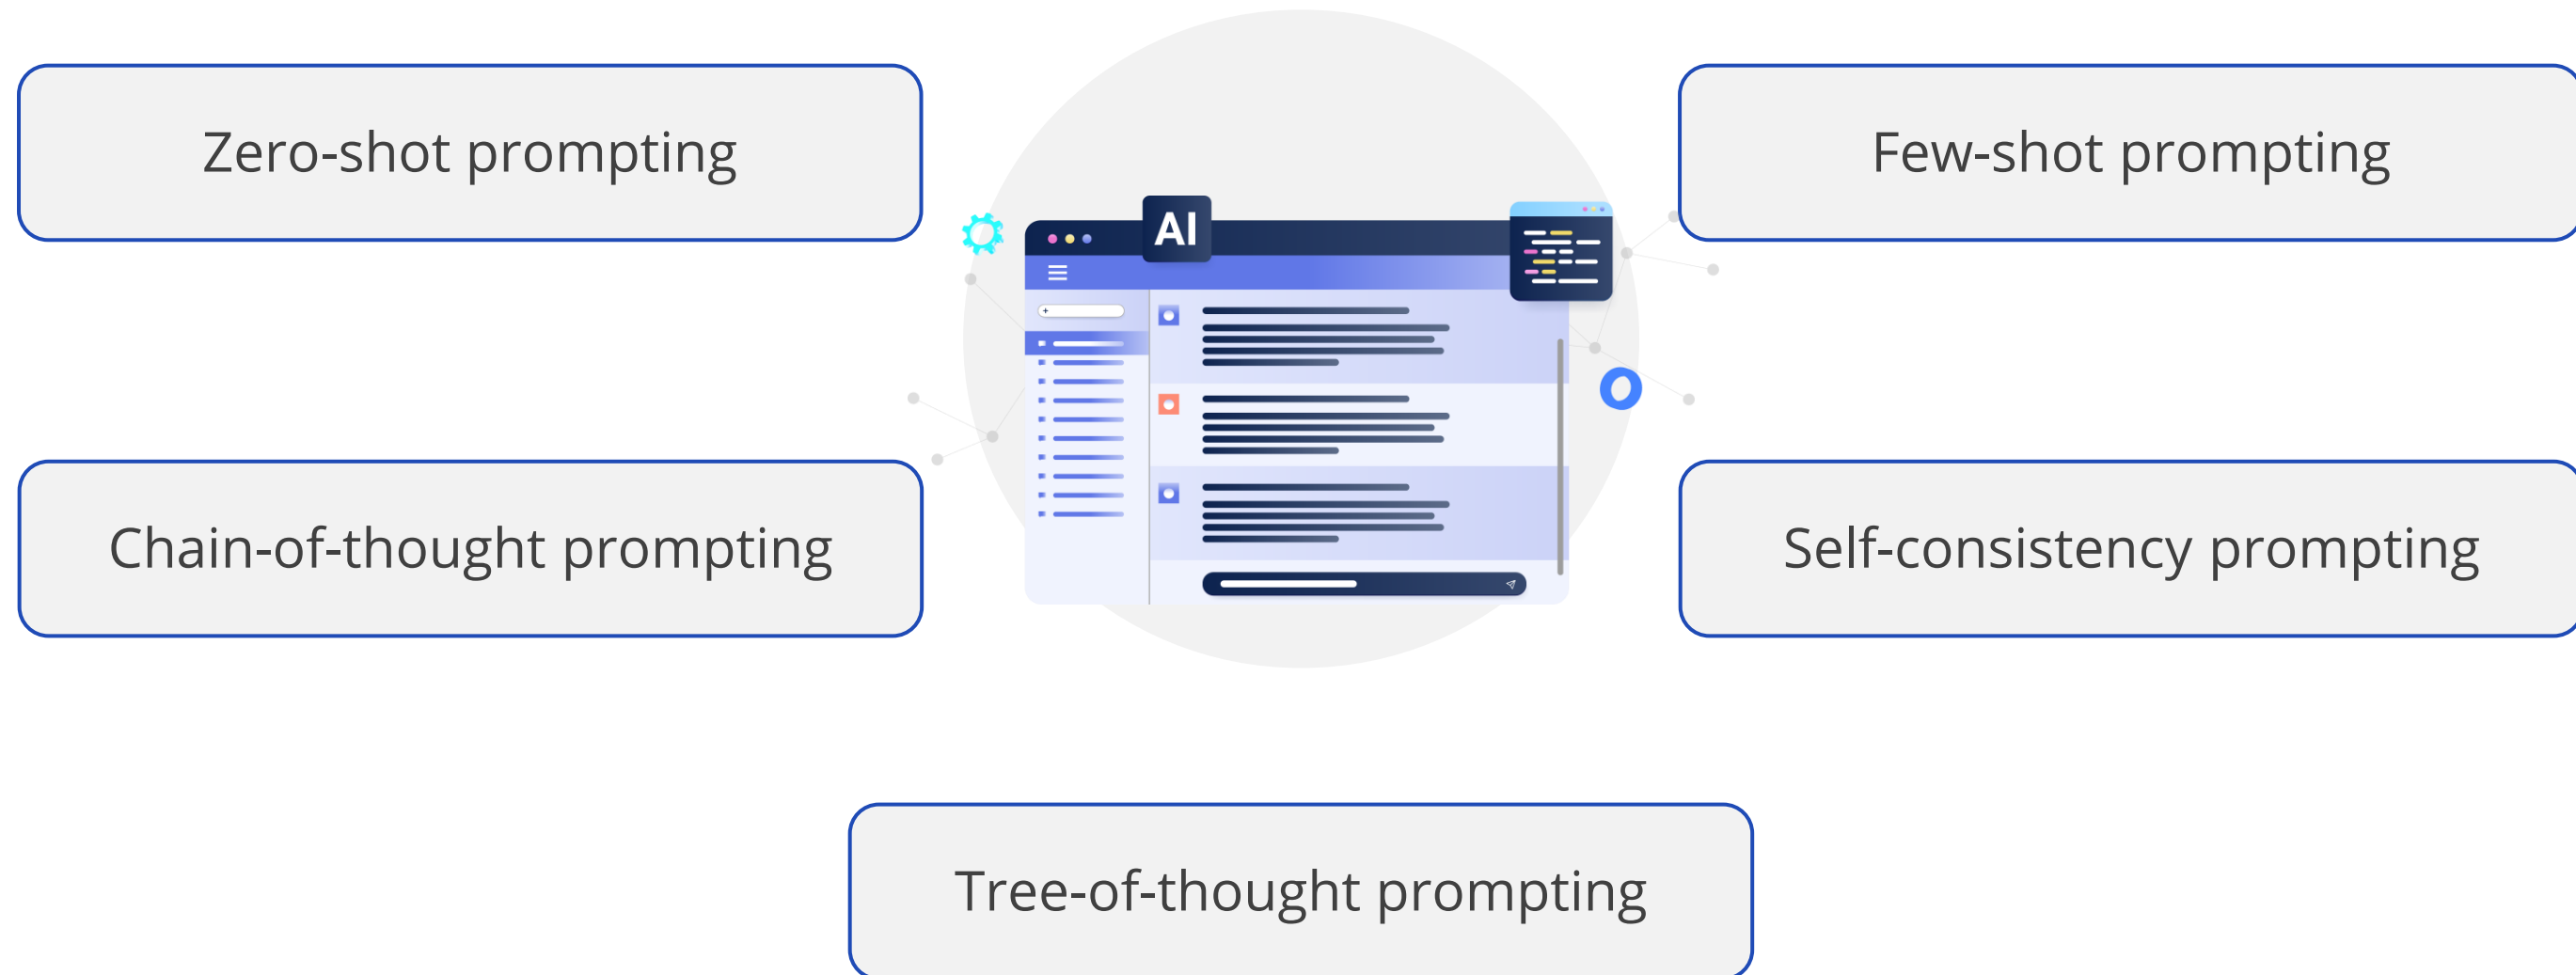

Advanced Prompting Techniques

Prompting Techniques: From Basics to Advanced

Listed below are some advanced techniques for prompting GenAI models to achieve desired outcomes.

Zero-Shot Prompting

It is a technique that provides a quick response with minimal guidance, helps in setting the context, and gives the desired output without any specific examples.

Its existing knowledge is used for task execution.

Do It on Your Own: Zero-Shot Prompting

Use ChatGPT to try out the prompt below:

Generating social media posts for a brand

You

Create a social media post for an organic skincare brand, highlighting the natural ingredients and eco-friendly packaging

ChatGPT

🌿 Embrace Nature's Nourishment! 🌿 Our organic skincare line is a radiant ode to the beauty of nature! 🌸 Infused with the purest botanicals and crafted with love, our products harness the power of nature to revitalize your skin! 🌿 From soothing aloe vera to luxurious coconut oil, each ingredient is carefully selected to pamper your skin and nurture your soul. ✨ And that's not all!

🌍 We're committed to sustainability every step of the way, from sourcing eco-friendly ingredients to our recyclable packaging. 🌱 Join us on our journey to radiant skin and a healthier planet! ❤️

#OrganicSkincare #NaturalBeauty #EcoFriendly #Sustainability #LoveYourSkin

Do It on Your Own: Zero-Shot Prompting

Use ChatGPT to try out the prompt below:

Performing a SWOT analysis

 **You**

Conduct a SWOT analysis for Coca-Cola

 **ChatGPT**

Sure, here's a SWOT analysis for Coca-Cola:

Strengths:

1. Strong Brand Recognition: Coca-Cola is one of the most recognized brands globally, with a strong reputation built over decades.
2. Wide Product Portfolio: Coca-Cola has a diverse range of products including sodas, juices, energy drinks, and water, catering to different consumer preferences.
3. Global Presence: The company operates in over 200 countries, giving it a vast international footprint and access to diverse markets.

Do It on Your Own: Zero-Shot Prompting

Use ChatGPT to try out the prompt below:

Building a to-do list

You

Develop a to-do list for organizing a small business conference

ChatGPT

Certainly! Here's a to-do list for organizing a small business conference:

1. Define Goals and Objectives:

- Determine the purpose of the conference.
- Set clear goals and objectives you want to achieve.

2. Budget Planning:

- Allocate funds for venue, speakers, catering, marketing, etc.
- Keep track of expenses to stay within budget.

Few-Shot Prompting

It is a style of guiding GenAI models with specific examples to achieve desired responses.

Provides the model with a limited number of specific examples and a definite context

Focuses on providing training sessions to the GenAI bot, enhancing the relevance and precision of the output

Offers a clearer idea of the specific task or style while leveraging the model's existing knowledge

Do It on Your Own: Few-Shot Prompting

Use ChatGPT to try out the prompt below:

You

A Flummoxibbly could be a fantastical creature that inhabits the enchanted forests of a far-off land. An example of a sentence that uses the word Flummoxibbly is:

As I wandered through the mystical forest, I caught a glimpse of a Flummoxibbly darting between the trees, leaving behind a trail of sparkling dust.

The Quizzbizzler is a magical device challenges its users with perplexing riddles. Give an example of a sentence that uses the word Quizzbizzler.

ChatGPT

In the depths of the ancient library, I stumbled upon the Quizzbizzler hidden amidst dusty tomes, its intricate design hinting at the challenging riddles it held within.

Chain-of-Thought Prompting (CoT)

It is a method of providing sequential prompts to the GenAI model to generate sequential outputs, rather than getting the entire output at once.

It encourages more thoughtful and detailed responses by avoiding the overload of multiple questions at once.

Do It on Your Own: Chain-of-Thought Prompting

Use ChatGPT to try out the prompt below:

 **You**

What are the main threats to global biodiversity?

 **ChatGPT**

Habitat loss, climate change, pollution, overexploitation, and invasive species.

 **You**

Given these threats, which conservation strategies are proving to be most effective?

 **ChatGPT**

Protected areas, habitat restoration, sustainable resource management, community-based conservation, and international cooperation.

 **You**

How do these strategies integrate with local human communities?

 **ChatGPT**

By involving local communities in decision-making, providing alternative livelihoods, promoting education and awareness, and respecting indigenous knowledge and rights.

 **You**

What emerging technologies are supporting conservation efforts?

 **ChatGPT**

Drones for monitoring, satellite imagery for tracking habitat changes, genetic techniques for species identification, and AI for data analysis and prediction.

Self-Consistency Prompting

It ensures that a GenAI bot delivers reliable and similar responses when asked the same questions repeatedly.

Example

Repeatedly prompting "What's the capital of France?" should consistently yield the answer *Paris*.

This process makes the AI more reliable, reduces confusion, enhances the user experience, and paves the way for efficient learning.

Do It on Your Own: Self-Consistency Prompting

Use ChatGPT to try out the prompt below:

You

What is the largest planet in our solar system?

ChatGPT

Jupiter.

You

Can you tell me which planet is the biggest in our solar system?

ChatGPT

Jupiter.

Tree-of-Thought Prompting (ToT)

It is a method in GenAI models that helps solve complex problems.

It forms a *tree* with various thought paths or steps, resembling branches on a tree.

Each branch represents a potential step or idea toward solving a problem.

The AI evaluates these branches to identify the best solution.

It is useful for tasks that require strategic thinking or involve multiple steps.

ToT Prompting: Example

Use ChatGPT to try out the prompt below:

 **You**

Find x in $2x+3=11$

 **ChatGPT**

To solve for x in the equation $2x + 3 = 11$, you would first isolate x by subtracting 3 from both sides to get:

$$2x = 11 - 3$$
$$2x = 8$$

Then, you would divide both sides by 2 to solve for x :

$$x = \frac{8}{2}$$
$$x = 4$$

So, $x = 4$.

Note: The AI uses ToT to break down the problem into smaller steps, evaluate each step, and arrive at the correct solution.

Best Practices for Creating Prompts

Best Practices: Prompt Creation

Dos

- Begin the requests with clear and specific framing.
- **Example:** List 5 Paris tourist attractions with 2-3 sentence descriptions.
- Offer context by providing background details.
- **Example:** I'm writing an article on sustainable farming practices, so I need information on the benefits of crop rotation and how it improves soil health.

Best Practices: Prompt Creation

Dos

- Ask follow-up questions if the response lacks completeness.
- **Example:** Your explanation of photosynthesis was helpful, but could you also briefly explain how plants use the energy produced during that process?
- Provide guidelines early on regarding tone, length, and format.
- **Example:** For this blog post, I need around 500 words written in a conversational, lighthearted tone with examples or analogies to explain complex concepts. Please use headings to break it into 3-4 sections.

Best Practices: Prompt Creation

Don'ts

- Don't provide unnecessary details.
- **Example:** Just give me the ingredients list for a basic spaghetti recipe, nothing more. I don't need details on preparation steps, cooking times, or serving suggestions.
- Don't give it too many tasks to perform at the same time.
- **Example:** First, draft an outline for the introduction section of the report. Then, research and write the background information. After that, analyze the data and summarize the key findings. Let's work on one component at a time.

Best Practices: Prompt Creation

Don'ts

- Don't provide any contradictory statements while prompting.
- **Example:** Describe a utopian society where everyone lives in harmony, but also include details about conflicts and divisions between different groups.

Note: Always validate the information given by the tool, as the GenAI model might generate an inaccurate response.

Demo: Refining Prompts

Duration: 15 minutes

In this demo, we will continue iterating on the prompt, demonstrating techniques like:

- Asking clarifying questions about elements that are still vague or unclear
- Providing examples to illustrate the desired type of response
- Adding or removing specificity as needed
- Setting guidelines for length, tone, structure, and more

DEMONSTRATION

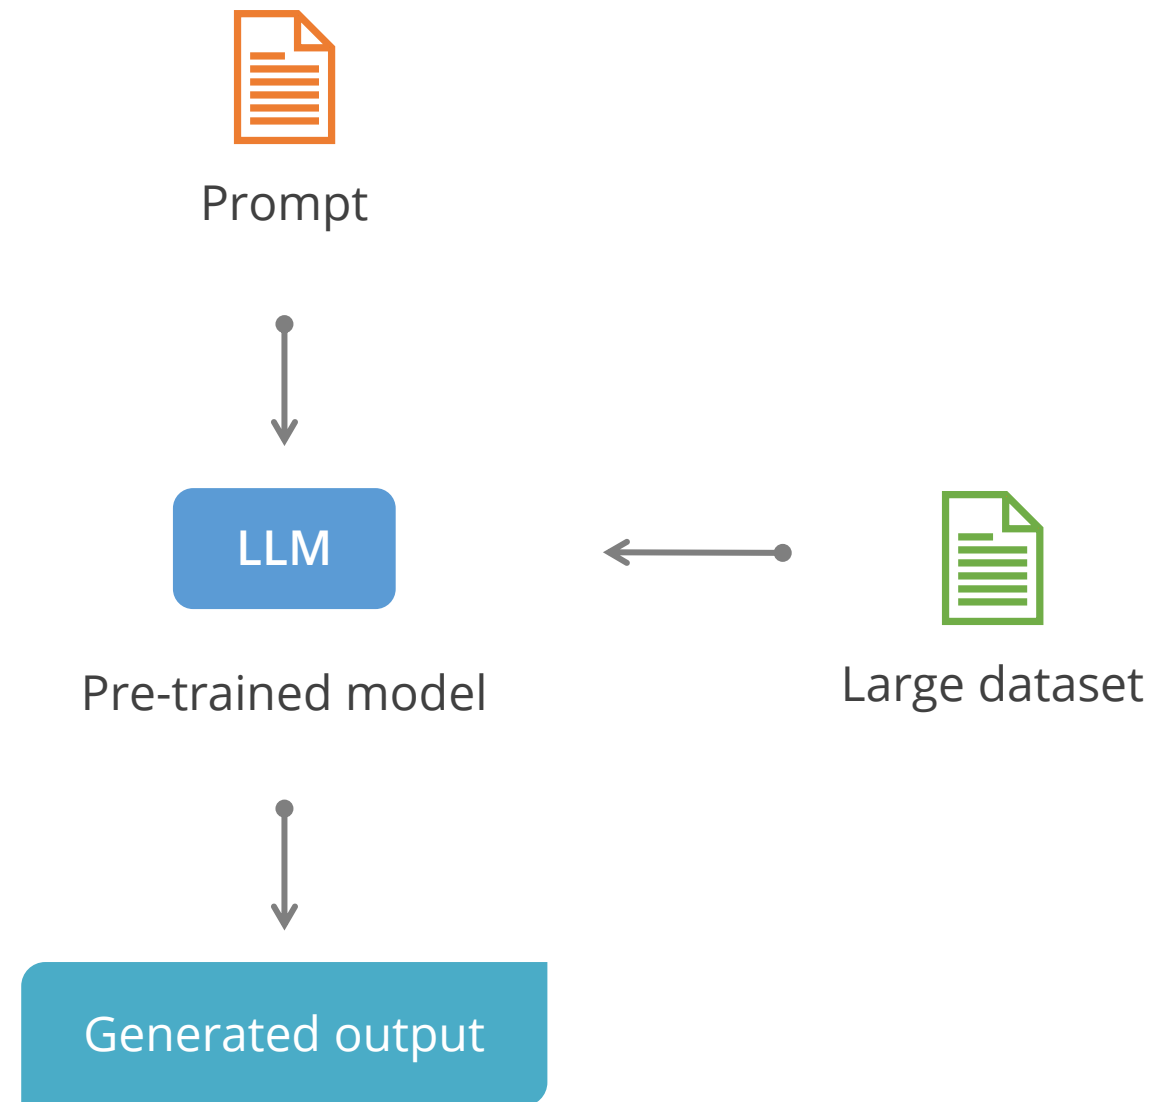

Note: Please download the demo documents from the LMS **Reference Material Section** for a detailed explanation.

Introduction to Fine-Tuning

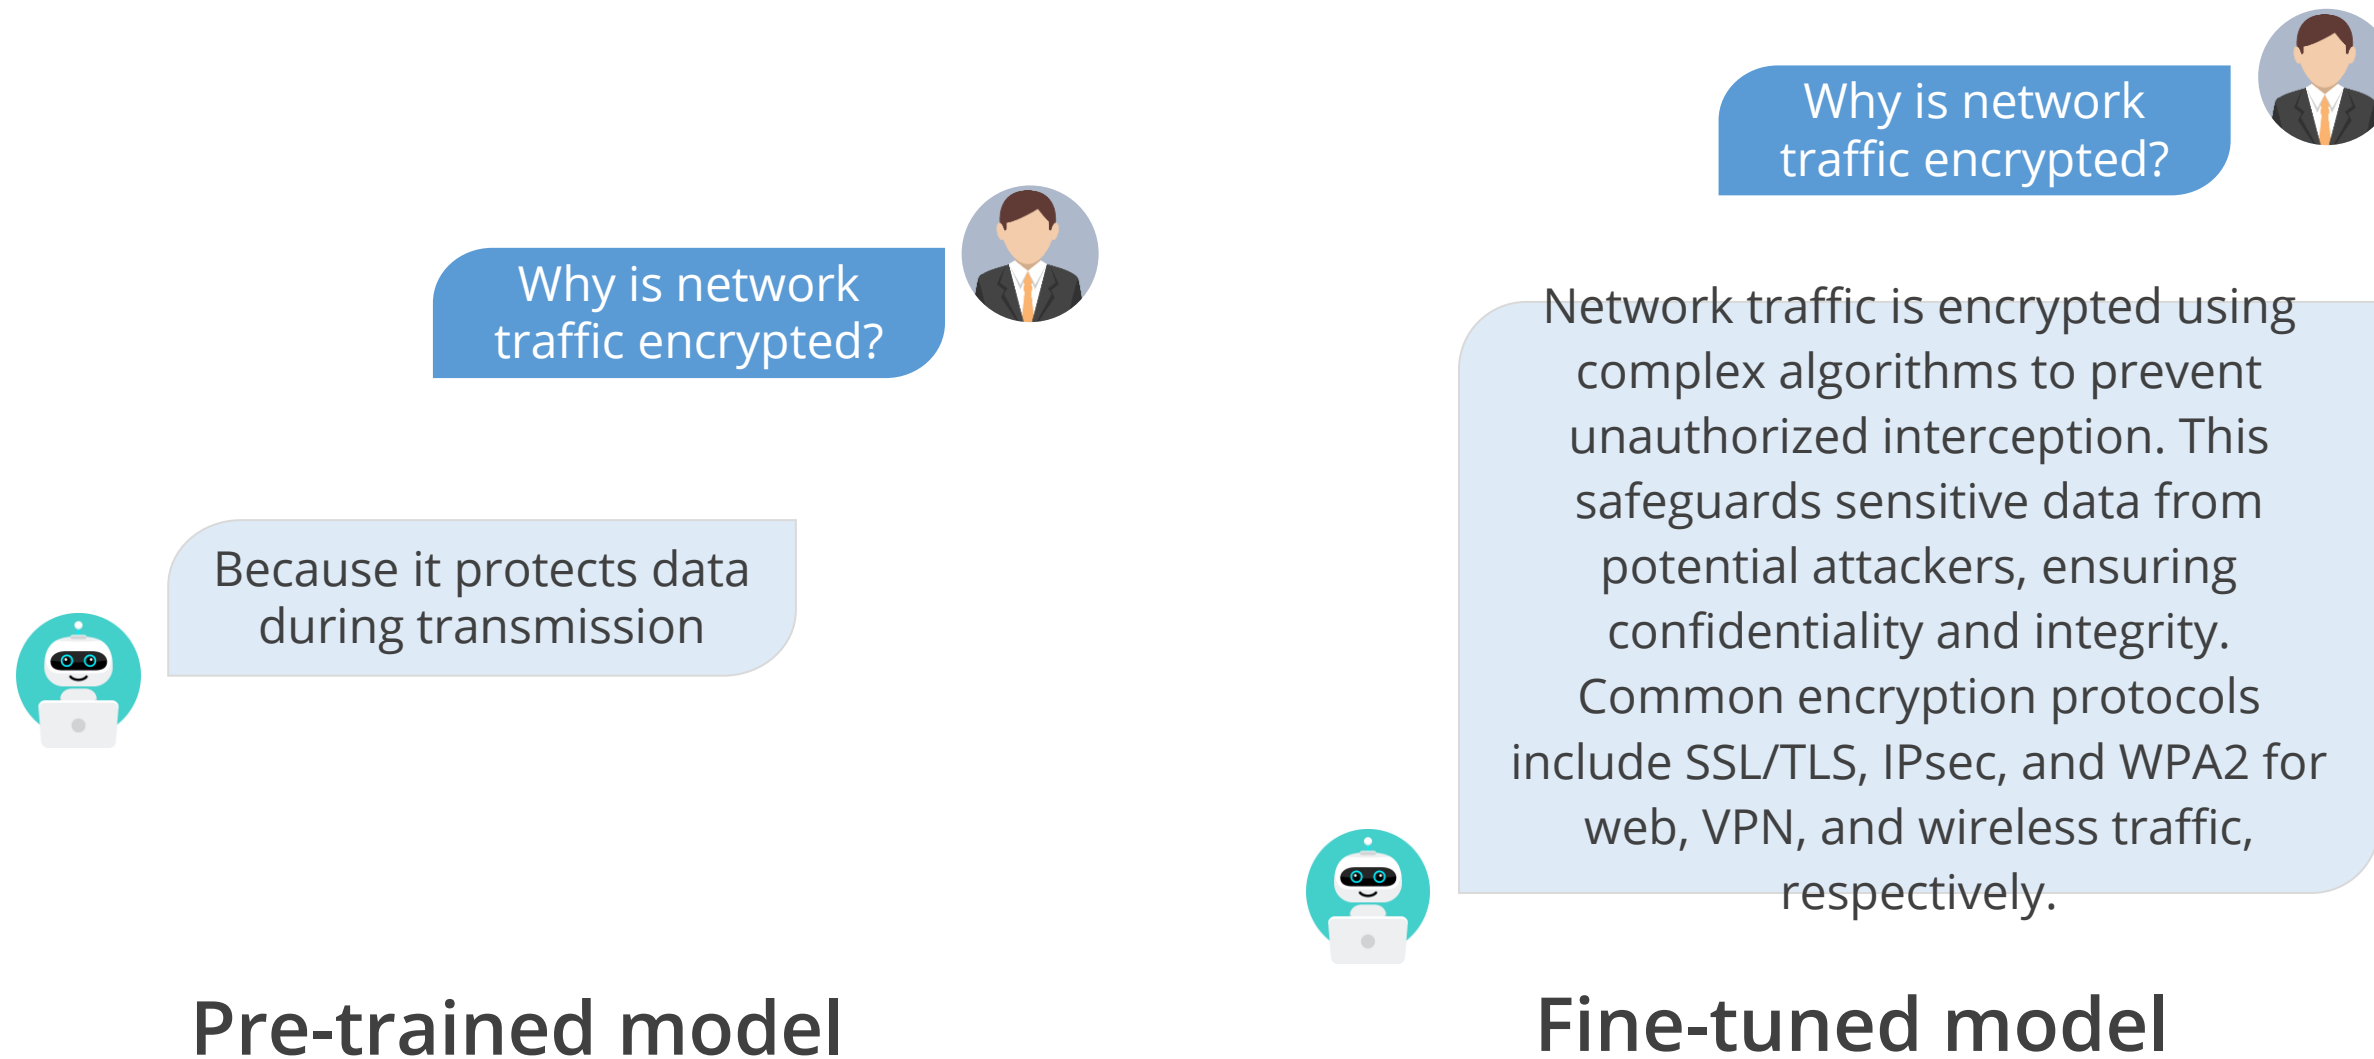

Pre-Training

Pre-training is the process of training a GenAI model on a large corpus dataset.

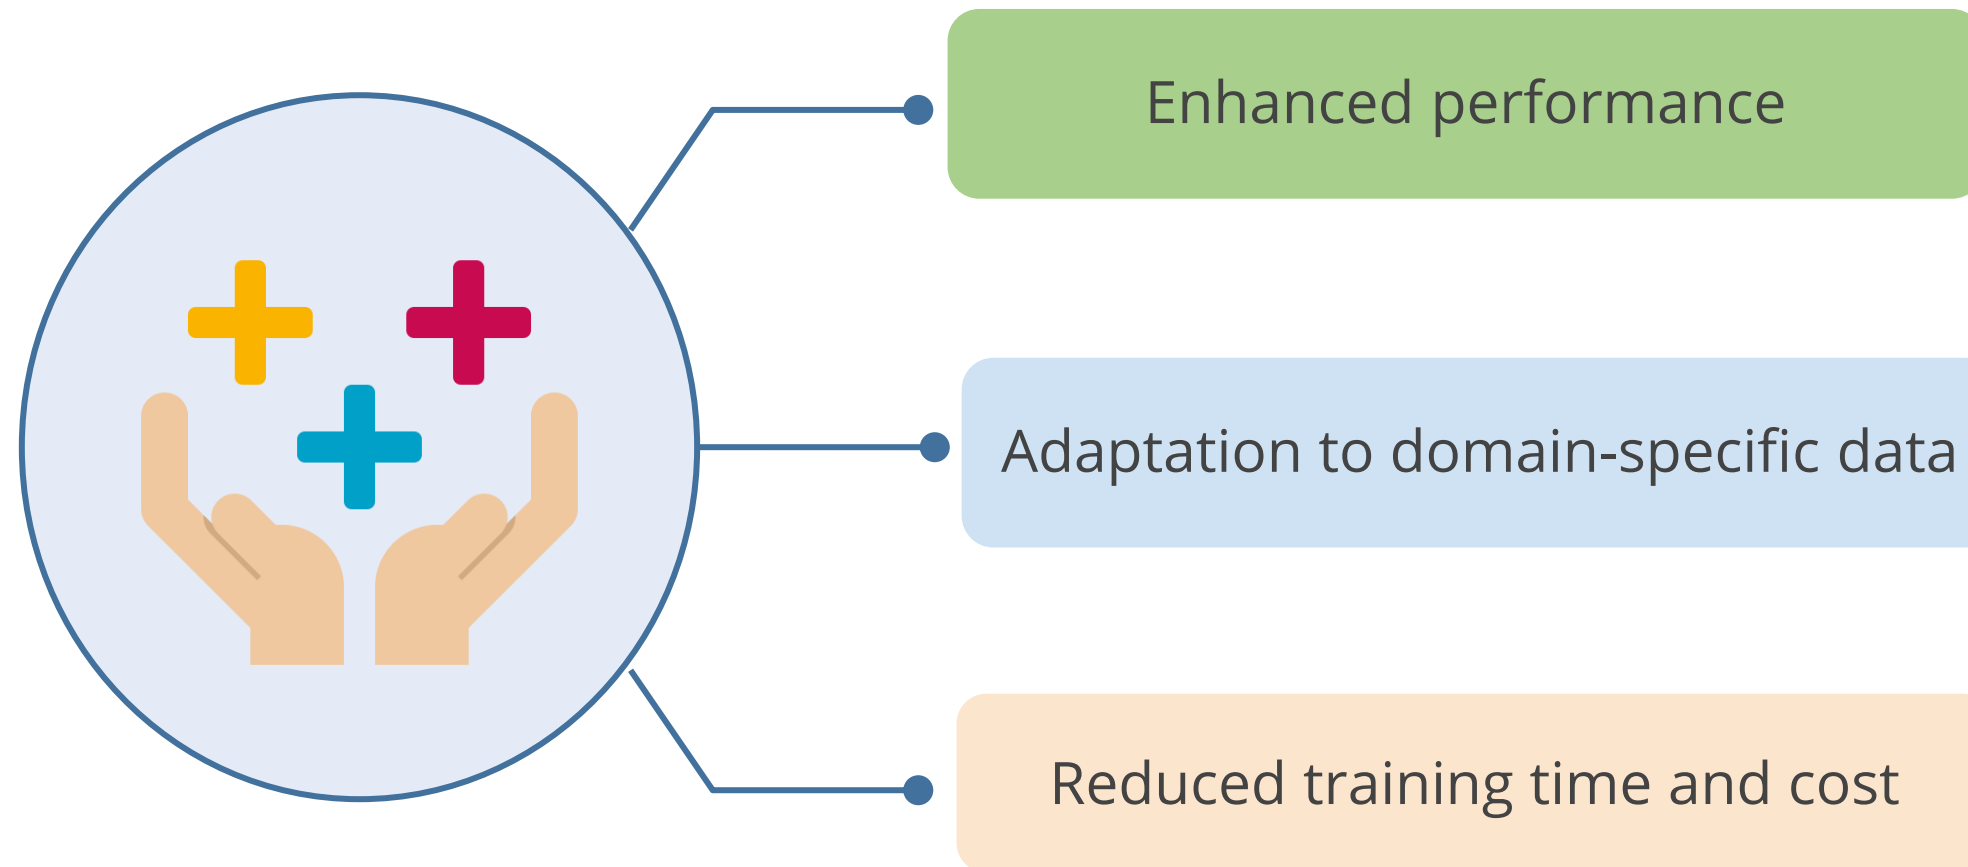

Fine-Tuning

Fine-tuning involves taking pre-trained models and training them more on smaller, specific datasets to enhance performance in a particular task or domain.

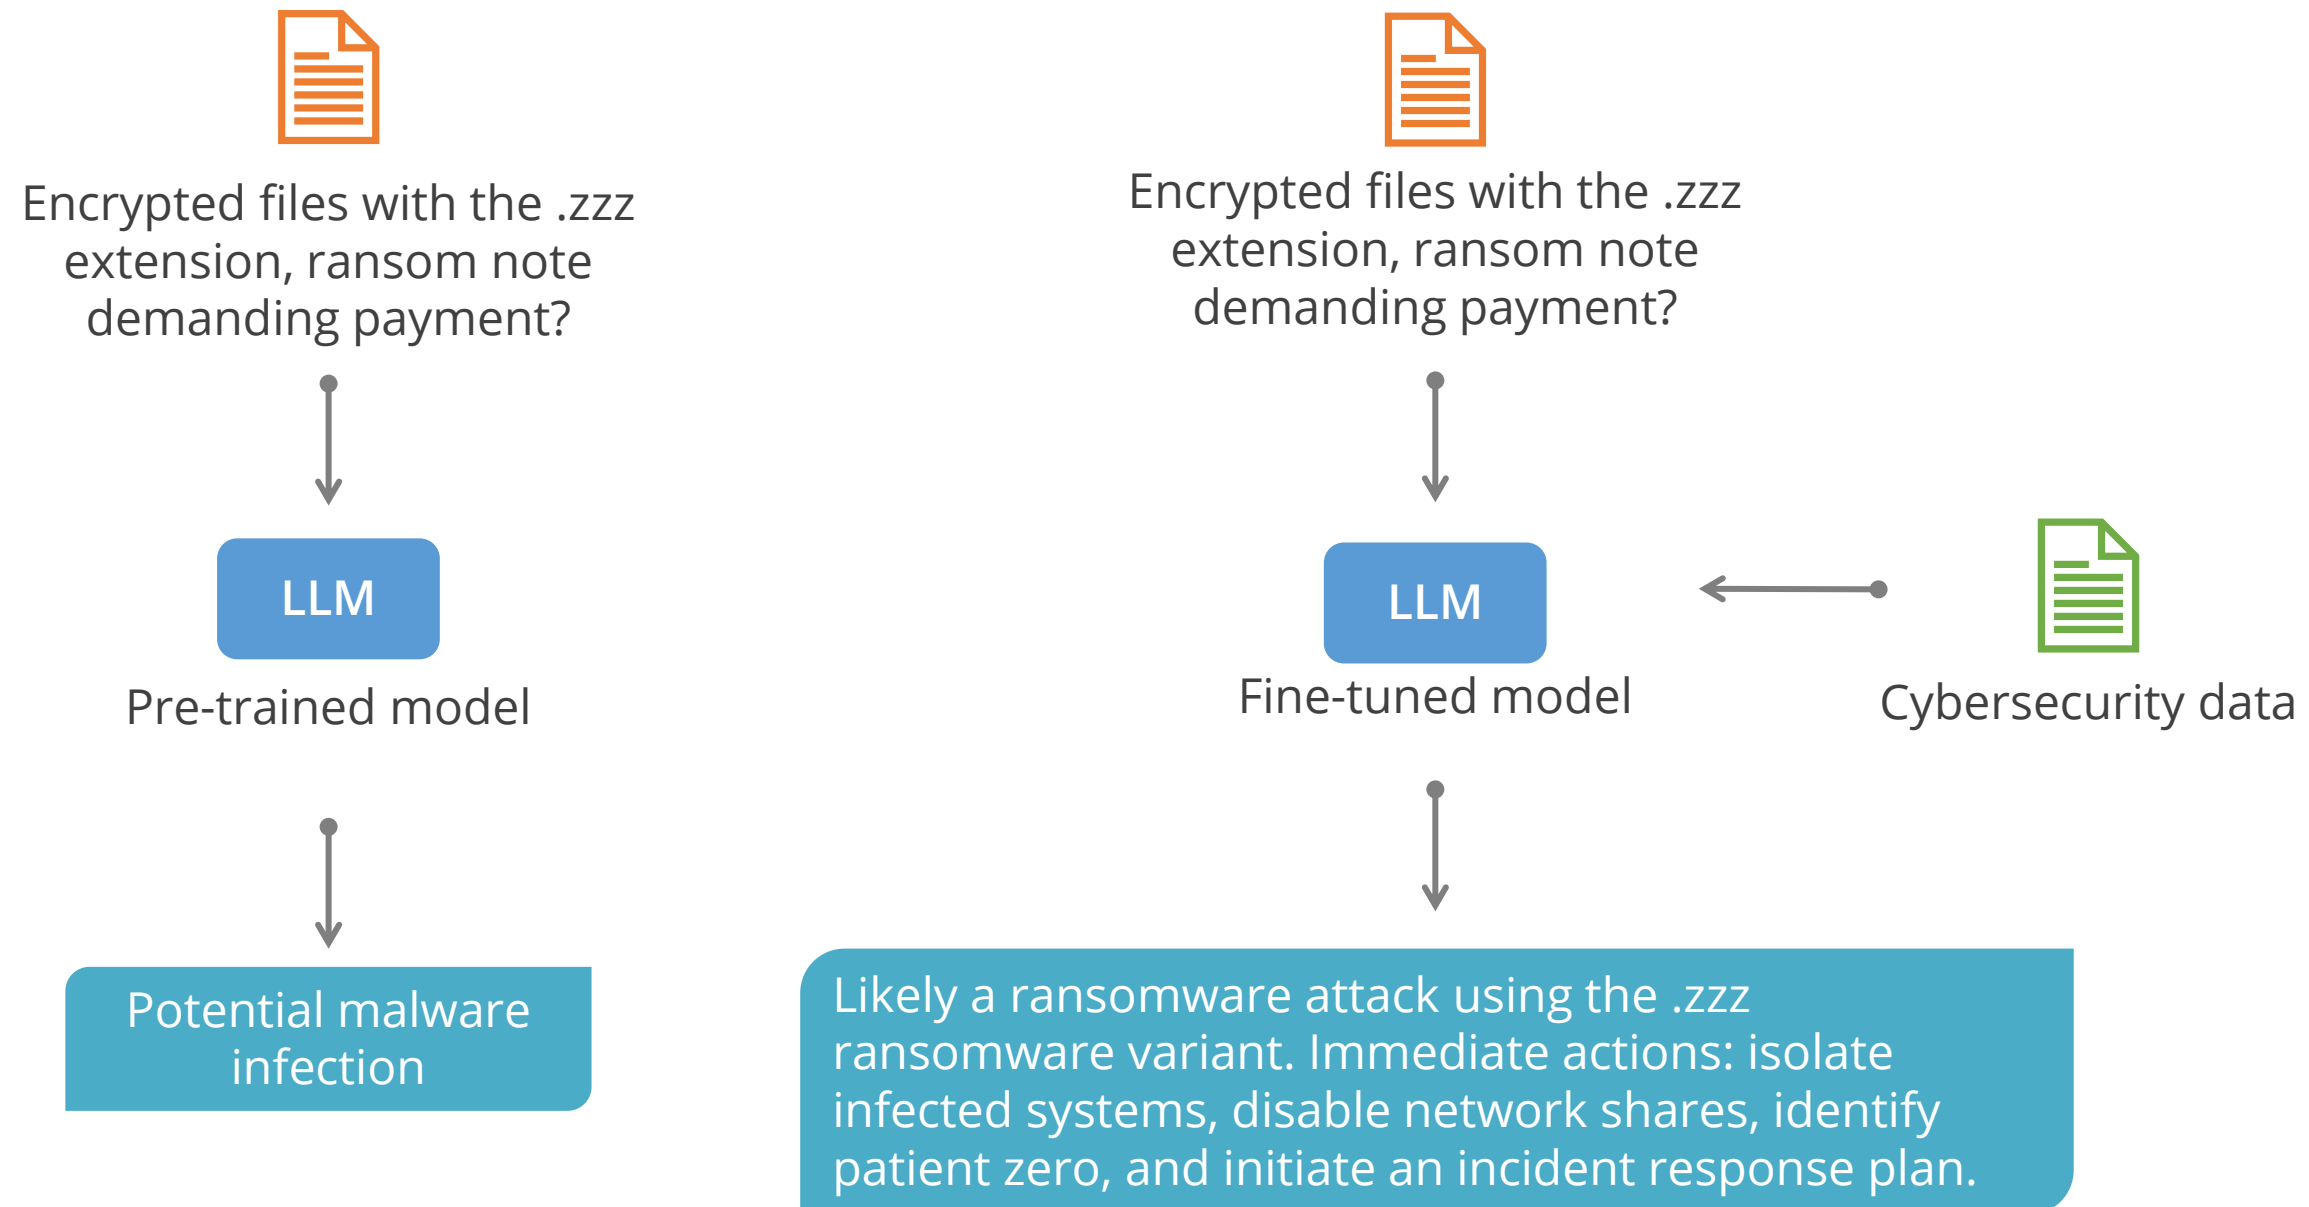

Benefits of Fine-Tuning

Fine-tuning ChatGPT offers several benefits, including:

Improved Performance and Domain Adaptation

Fine-tuning GPTs on task-specific data helps them understand the subtle details and complexities of the target domain.

Considerations for Fine-Tuning Language Models

Fine-tuning isn't always the best choice. Consider this scenario: You've fine-tuned a base model using your Slack messages dataset.

Write a report analyzing the impacts of climate change.

Sure, I can work on that report tomorrow and have it ready for you.

No, I need you to write it now. I'm on a tight deadline.

Understood. Let me begin drafting that report analyzing climate change impacts right away.

Challenges of Fine-Tuning

Overfitting

Undesirable fine-tuning behavior where an LLM excels on training data but struggles with new tasks or domain-specific data.

Catastrophic forgetting

Fine-tuning may cause the LLM to forget all pre-training knowledge, leading to catastrophic forgetting.

Expensive

Fine-tuning LLMs for specific tasks demands substantial data, which is difficult to collect and expensive. Complex computing infrastructure adds to the cost.

Bias

Pre-trained LLMs may carry biases, which can worsen during fine-tuning. Bias mitigation measures should be in place before fine-tuning.

Note: The process of fine-tuning is time-consuming and expensive to implement.

Guided Practice

Overview

Duration: 30 minutes

In this activity, you will craft an effective prompt by applying advanced prompting techniques. This activity will help you gain hands-on experience with writing prompts.

GUIDED PRACTICE

Note: Please download the demo documents from the LMS **Reference Material Section** for a detailed explanation.

Key Takeaways

- Prompt engineering involves creating clear and effective instructions to guide large language models in generating desired outputs.
- Advanced techniques in prompt engineering, such as zero-shot and few-shot methods, assist in creating effective prompts.
- Fine-tuning customizes large language models for specific tasks or fields using specialized data.
